Template pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Achmea Dutch Residential Fund Legal entity identifier: N/a

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The EU Taxonomy is a classification system laid down in Regulation (EU) 2020/852, establishing a list of environmentally sustainable economic activities. That Regulation does not include a

does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Does this financial product have a sustainable investment objective?					
••	Yes	• 0 🖂	No		
	It will make a minimum of sustainable investments with an environmental objective: %		It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 75% of sustainable investments		
	in economic activities that qualify as environmentally sustainable under the EU Taxonomy		with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy		
	in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy		with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy		
			with a social objective		
	It will make a minimum of sustainable investments with a social objective:		It promotes E/S characteristics, but will not make any sustainable investments		

What environmental and/or social characteristics are promoted by this financial product?

The Fund promotes environmental and social characteristics by investing in future-proof residential real estate where financial and social returns go hand in hand.

The Fund specifically focuses on properties that are future-proof from an environmental perspective by:

- aiming for as much real estate as possible in the portfolio with at least energy label A, with the exception of residential properties to be sold as individual units; and
- 2. achieving a reduction in CO₂ emissions.

From a social perspective, the Fund focuses on real estate that is attractive and contributes optimally to quality of life. The focus here is on:

- 3. tenant satisfaction; and
- 4. housing affordability.

It also focuses on high-quality property and sustainable portfolio management. Efforts are thus made to continuously improve the sustainability policy and sustainability performance of the real estate portfolios compared to similar real estate portfolios in the market through the Global Real Estate Sustainability Benchmark (GRESB). Although this is not a reference benchmark as defined in

European legislation, this assessment is used to achieve and understand the environmental and social characteristics promoted by the Fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The following sustainability indicators are used to measure the environmental and social characteristics of the Fund:

- 1. The distribution of the energy labels in the portfolio
- 2. Carbon emissions per m2 of the portfolio compared to the CRREM standard set for the portfolio
- 3. The percentage of affordable rental properties in the portfolio
- 4. Tenant satisfaction with housing
- 5. GRESB score
- What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

Real estate can contribute to an environmental objective by being energy efficient and having low carbon emissions. In that case limited natural resources are required and this contributes to the mitigation of climate change. This is determined for each real estate property based on the energy label. When a real estate property has energy label A or higher, it contributes to the objective to mitigate climate change.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Besides aiming to contribute to a sustainable investment objective for some of the properties in the portfolio, it must be ensured that properties do not harm other sustainability topics. Real estate can have adverse impacts on the climate, particularly through carbon emissions.

The adverse impacts of the properties on the environment determine whether a property is sustainable. This is determined using the following indicators for adverse impacts prescribed by European sustainability legislation:

- Exposure to fossil fuel activities (such as the extraction, storage, transportation or production of fossil fuels);
- Energy efficiency of real estate (for real estate built before December 2020, the property must have at least an energy label B and real estate built after December 2020, the limit is that the maximum primary energy consumption must be equal to or lower than the BENG2 (Nearly zeroenergy buildings) standard), and;
- Optionally selected indicators are energy consumption and CO₂ emissions. We measure these indicators periodically and pursue a CO₂ reduction target at portfolio level.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Fossil fuel activities

The properties in which the portfolio invests are residential properties and these are not involved in fossil fuel activities, such as the extraction, mining and storage of fossil fuels. Therefore, there is no exposure of the portfolio to such activities.

Energy efficiency

For energy efficiency, this is one of the key sustainability issues based on which properties are selected and managed within the portfolio. Newly constructed properties must comply with BENG2 based on applicable legislation and, in addition,

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

the energy label of existing properties to be purchased is important in the Fund's investment decision. With respect to existing properties in the portfolio, insight has been provided into how properties will be made more sustainable to energy label A, except for the properties to be sold.

To improve energy efficiency, Achmea Real Estate (trade name of Syntrus Achmea Real Estate & Finance B.V.) is actively working to make the real estate in the portfolio more sustainable. With the CO2 Reduction Roadmap, the portfolio has insight into which sustainability scenarios can be used to reduce CO2 emissions and achieve the goals of the Dutch Climate Agreement.

CO₂ emissions and energy consumption

The CO_2 emissions and energy consumption of real estate properties are strongly related to the energy efficiency of real estate. Our goal is for the real estate portfolio to be CO_2 neutral by 2050. We monitor the CO_2 emissions of the portfolio and report on them annually.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

These international norms mainly apply to the investment in companies. As the Fund solely invests in real estate, the investments are not aligned with these international standards.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

□ No
The legislation has defined the principal adverse impacts of real estate mainly in the form of
environmental indicators. The two most important adverse impacts are energy inefficiency
(measured based on energy labels for real estate built until 2020 and the BENG2 norm for real estate
built after 2020) and the exposure to fossil fuel activities. In addition, carbon emissions and energy
intensity of real estate is considered. In the annual report of the Fund information will be included

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

The investment strategy is described in the portfolio plan. Besides achieving financial returns, the Fund also has social return objectives. For this purpose, the Fund has drawn up an ESG strategy that is used to weave environmental and social characteristics into the Fund's investment policy. The targets formulated in the investment strategy are approached through core objectives. These include reducing carbon emissions, acquiring rental properties in the mid-segment and initiatives that help improve tenant satisfaction. The Fund continuously pursues these core objectives. Besides these core objectives, the Fund also intends to continue developing other activities that contribute to its social and financial return. Examples include paying extra attention to surrounding green areas, indoor climate and social security.

This investment strategy is applied throughout the investment process. The Fund's environmental and social characteristics are complied with in two ways: first, by selecting properties that match the environmental and social characteristics, and second by making existing properties in the portfolio perform better based on the environmental and/or social characteristics. Specifically, this means looking at the sustainability performance of new and existing real estate, such as the energy label to be achieved, the BENG standards, natural gas-free real estate and climate risks. Agreements are made with tenants in lease contracts. This is done with the aim of future-proofing the portfolio by reducing the real estate's impact on climate change and protecting the portfolio from climate change.

It also means looking at the social performance to be achieved, such as providing affordable housing by matching the level of rent to the potential target group, enhancing the inclusivity of the housing market, combating loneliness through the presence of facilities and places to meet in or around the building and enhancing tenants' well-being, including by optimising the safety and positive health effects that a building can offer. This is assessed not only through our 'Schedule of Requirements', but also through measurement with instruments such as the 'GPR Gebouw score', the tenant satisfaction survey, annual participation in GRESB and the 'Social Impact Monitor' we have developed.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

When acquiring new properties and managing the properties in the portfolio, the following binding elements apply:

- All properties in the portfolio, with the exception of properties to be sold, must have a green energy label (A-B-C). Making the portfolio more sustainable will lead to 95% energy label A by 2026.
- 2. This will also achieve a CO_2 reduction in accordance with the -55% CO_2 reduction target for the entire portfolio in 2030 and -100% CO_2 reduction in 2050 (compared to base year 1990).
- 3. The average tenant satisfaction of the entire housing portfolio on the item 'satisfaction with of the residential unit' is at least a 7.
- 4. The goal is to qualify new acquisitions as affordable rent upon acquisition.
- What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

This question is not applicable to the Fund. Good corporate governance is especially relevant to the investment in companies. The Fund invests in real estate. Consequently, the policy to assess good corporate governance practices of the investee companies has not been explained.

What is the policy to assess good governance practices of the investee companies?

Good corporate governance is especially relevant to the investment in companies. The Fund invests in real estate. Consequently, the policy to assess good corporate governance practices of the investee companies has not been explained.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax

compliance.

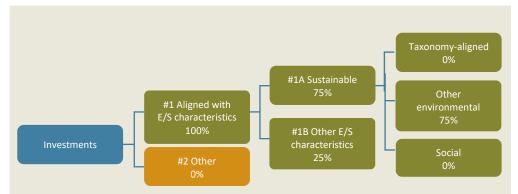

Asset allocation describes the share of investments in specific assets.

What is the asset allocation planned for this financial product?

Taxonomy-aligned activities are expressed as a share of:

- turnover
 reflecting the
 share of revenue
 from green
 activities of
 investee
 companies.
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- a green economy.
 operational
 expenditure
 (OpEx) reflecting
 green operational
 activities of
 investee
 companies.

The portfolio's investments consist exclusively of real estate. These properties fall into one of the two categories below:

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product in line with the binding elements of the investment strategy.

#2 Other includes the other investments of the financial product that are not aligned with the environmental or social characteristics and also do not qualify as sustainable investments.

The **#1 Aligned with E/S characteristics** category consists of:

- **Sub-category #1A Sustainable** covers sustainable investments with environmental or social objectives. These are sustainable investments that contribute towards an environmental objective and fall under the 'Other environmental' category.
- **Sub-category #1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments. The remainder of the portfolio does not qualify as sustainable.
- How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

This question is not applicable to the Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

This section does not apply to the Fund as there is no intended minimum allocation to sustainable investments with an environmental objective aligned with the EU taxonomy.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?

Yes:		
	in fossil gas	in nuclear energy

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste

sil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate ge ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid in Commission Delegated Regulation (EU) 2022/1214.

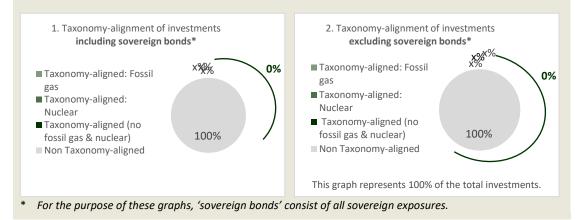

ntractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, of Regulation (EU) 2020/852 | 5 / 7

Enabling activities

management rules.

⊠ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

- What is the minimum share of investments in transitional and enabling activities?
 - This question is not applicable to the Fund.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Real estate properties that do not meet the Taxonomy criteria, but that do meet the criteria for sustainable investments with an environmental objective, are therefore a sustainable investment with an environmental objective in economic activities that are not aligned with the Taxonomy. The Taxonomy criteria have not yet been fully developed. In addition, there is still uncertainty about how a number of detailed requirements in the Taxonomy should be applied in concrete terms to real estate objects, so that it is not yet possible to determine definitively whether real estate objects are aligned with the EU taxonomy. For this reason, an alternative definition has been formulated for sustainable investments that contribute to mitigating climate change. The minimum share of sustainable investments with an environmental objective that is not aligned with the EU Taxonomy is at least 75% of the Fund's investments.

What is the minimum share of socially sustainable investments?

This question is not applicable to the Fund.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

All investments of the Fund comply with the environmental and social characteristics which have been included in this document.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Where can I find more product specific information online?

More product-specific information can be found on the website: https://www.achmearealestate.nl/en/investing/funds/achmea-dutch-residential-fund

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.
